The Journal of Mind and Behavior (JMB) is dedicated to the interdisciplinary approach within psychology and related fields — building upon the assumption of a unified science. Mind and behavior position, interact, and causally relate to each other in multidirectional ways; **JMB** urges the exploration of these interrelationships. The editors are particularly interested in scholarly work in the following areas:

- *The psychology, philosophy, sociology of experimentation and scientific method*
- *The relationship between methodology, operationism, and theory construction*
- *The mind/body problem in the social sciences, psychiatry, the medical sciences, and the physical sciences*
- *Philosophical impact of a mind/body epistemology upon psychology and its theories of consciousness*
- *Critical examinations of the DSM - biopsychology - somatotherapy framework of thought and practice*
- *Phenomenological, teleological, existential, and introspective reports relevant to psychology, psychosocial methodology, and social philosophy*
- *Issues pertaining to the ethical study of cognition, self-awareness, and higher functions of consciousness in non-human animals*
- *Historical perspectives on the course and nature of psychological science*

JMB is based upon the premise that all meaningful statements about human behavior rest ultimately upon observation — with no one scientific method possessing, a priori, greater credence than another. Emphasis upon experimental control should not preclude the experiment as a measure of behavior outside the scientific laboratory. The editors recognize the need to propagate ideas and speculations *as well as* the need to form empirical situations for testing them. However, we believe in a working reciprocity between theory and method (not a confounding), and in a unity among the sciences. Manuscripts should accentuate this interdisciplinary approach — either explicitly in their content, or implicitly within their point of view.
