Agric. Econ. – Czech

Bojnec Š., Fertő I.:

Information and communication infrastructure development and agro- food trade

Agric. Econ. – Czech, 57 (2011): 64-70

The purpose of this paper is to provide an adapted gravity trade model to measure the influence of communication infrastructure development on agro-food trade. The adapted gravity trade model presents associations of bilateral agro-food trade between OECD countries with

traditional gravity equation variables and particularly with variables of the information and communication infrastructure development. Using the adapted gravity trade model we find a positive association between the information and communication infrastructure development and bilateral agro-food trade flows between OECD countries. This association is significantly
