http://www.firstlight.cn 1994-06-30

In this paper, the definition of the logit regression with errors-in-variables (FV-logit model) is given. The problem of identifiability of th e model is discussed, and the parameters in the model are consistntly estimated by correcting the quasimaximum-likelihood estimates for the p arameters in the quasi FV-logit model. Stochastic Simulation is conducted. Finally, a medical example is given.
