# **Agric. Econ. – Czech**

**Andrei T., Oancea B.,  
Profiroiu M.:**

**An analysis of the  
Romanian agriculture  
using quantitative  
methods**

*Agric. Econ. – Czech, 57 (2011): 85-92*

The paper presents a series of models used to identify the characteristics of the Romanian agriculture in the 1960– 2006 period of time. Using econometric methods we try to identify significant differences between agricultural productions obtained before and after the

year of the Revolution. Thus, following the dynamics of time series considered we identified two different time periods. The first is located before the 1989 revolution, and the second in the period that followed it. The two periods are different compared to the evolution of the considered indicators.
