Agric. Econ. – Czech

Buday S.: Agricultural land market in Slovakia

Agric. Econ. – Czech, 53 (2007): 146-153

The agricultural land market in Slovakia has noted an increased dynamics recently. Such situation was a result of entering big foreign investors, particularly car factories, which had bought agricultural land for construction purposes. It resulted in the raised prices of plots. Agricultural land prices sold for the further agricultural use are markedly lower from the national point of view than in the EU-15. Such prices are also the

third lowest ones within the new member countries of the EU.

Keywords:

land market, land market prices, land area, plot size, official land prices
