Agric. Econ. – Czech

D. Šimo, N. Kulková

The comparison of natural and value indicators of cereals in the Slovak Republic in accession period to European Union

Agric. Econ. – Czech, 50 (2004): 336-
341

Cereals have a significant position in land farming in Slovakia. Important commodities are wheat, barley and maize. In the years 1999– 2000, a research showed that Slovakia' s natural production was lagging behind the developed countries of the EU. Extraordinary low yields were recorded in the economic year 2000/2001 due to drought during the vegetation period. In this paper, there are analyzed the production prices, costs, cereals efficiency and profitability costs. We have also calculated the break-even point in yields, in costs and in production prices of cereals. In addition, we have done some suggestions and recommendations on how to analyze the results.

Keywords:

cereals, production prices, costs, break-even point in yields, costs and prices
