Abstract: The national economy is consisted of several enterprises that depend on different sectors. In our country, the most important part of economic activities in forestry sector focuses on forest enterprises. In order to improve economic role of forestry sector both in regional and countrywide, these enterprises should be managed with respect to economic rules. In this research, a socio-economic structure consisted of 11 economic variables obtained from forest enterprises and 25 individuals (Forest Enterprises) is examined by the use of principal component analysis. The Eastern Black Sea Region consisted of 25 forest enterprises was chosen as a study area. The data required for the research were obtained from the office studies.
