The Analysis on Financial Cooperative Controlling Mechanism of Enterprise Group

PDF (Size: 343KB) PP. 401-408 DOI: 10.4236/ib.2010.24053

Author(s)

Ziqin Feng

ABSTRACT

As the core of modern market economy, enterprise group is an advanced form of organization after productive forces reached to a certain stage. For the reason of complexity and specificity of organizational form of enterprise group, the issue of financial cooperative control has been widespread concerned by theorists. Although many researches have been done, but there are still lacking of systematic research results especially in the fields of mechanism of financial cooperative control. After exploring the relationship of value effect and financial control, this paper puts forward a system model of financial cooperative control. It also gives a system analysis including system hierarchy analysis, synergy analysis and coupling analysis. All of these can provide a decision making support for the collaborative management of enterprise group.
