由Dvoretzky随机覆盖引起的集合的Hausdorff维数

唐军民

杭州电子科技大学数学研究所 杭州 310018

摘要: 考虑了单位圆 $T=R/Z$ 上的随机区间 $I_n(\omega)=\omega_n+(-I_n/2, I_n/2), (\text{mod } 1)$, 其中 $\{I_n\}_{n \geq 1}$ 为一列单调下降并趋于0的正实数, $\{\omega_n\}_{n \geq 1}$ 为 T 上的一列独立同分布且具有Gibbs分布测度的随机变量. 借助于重分形分析中的工具, 估计了被随机区间序列 $\{I_n(\omega)\}$ 有限次覆盖以及无穷多次覆盖的集合的Hausdorff维数.

Hausdorff Dimension of Sets Arising from Dvoretzky Random Covering

Jun Min TANG

Institute of Mathematics, Hangzhou Dianzi University, Hangzhou 310018, P. R. China

Abstract: We consider the random intervals $I_n(\omega)=\omega_n+(-I_n/2, I_n/2) \pmod{1}$, where $\{I_n\}_{n \geq 1}$ is a sequence of positive real numbers which is decreasing to zero and $\{\omega_n\}_{n \geq 1}$ is an i.i.d. sequence with Gibbs distribution measure on the circle $T=R/Z$. Using the tools from multi-fractal analysis, we estimate the Hausdorff dimension of sets which are covered finitely or infinitely many times by $\{I_n(\omega)\}$.

Keywords: random covering Gibbs measure local dimension hitting time
