摘要

<正> In a recent paper the present author has established some representations for a plane curve C in the neighbourhood of a singular point O characterized by the property that the tangent $t(?)$ of C at O has a contact of order $m-1(??)2$ with the curve. For convenience's sake we have adopted non-homogeneous coordinates x,y of a point to represent the expansion of the curve.

PROJECTIVE DIFFERENTIAL GEOMETRY OF SINGULARITIES OF PLANE CURVES

BUCHIN ,SU

Abstract <正> In a recent paper the present author has established some representations for a plane curve C in the neighbourhood of a singular point O characterized by the property that the tangent $t(?)$ of C at O has a contact of order $m-1(??)2$ with the curve. For convenience's sake we have adopted non-homogeneous coordinates x,y of a point to represent the expansion of the curve.
