**摘要** <正> In a recent paper of the same title we studied the plane sections of the circumscribed developable of a curve in the projective n-dimensional space  $S_n(n \geq 3)$  confining ourselves to the consideration of the planes contained in the osculating space  $S_3(P)$  at an ordinary point  $P$  of the curve. In particular, the plane section  $x_3$  made by a plane through the tangent of the curve at  $P$  has an inflexion at  $P$  and consequently admits an invariant point  $O_6$ , namely, the cusp of the cubic which has with  $x_3$  a contact of ...
