

Witten's perturbation on strata

Jesús A. Álvarez López, Manuel Calaza

(Submitted on 2 May 2012 (v1), last revised 29 Oct 2012 (this version, v5))

The main result is a version of Morse inequalities for the minimum and maximum ideal boundary conditions of the de Rham complex on strata of compact Thom-Mather stratifications, endowed with adapted metrics. An adaptation of the analytic method of Witten is used in the proof, as well as certain perturbation of the harmonic oscillator related with the Dunkl harmonic oscillator.
