

# Non-formal Homogeneous Spaces

[Manuel Amann](#)

(Submitted on 4 Jun 2012)

Several large classes of homogeneous spaces are known to be formal---in the sense of Rational Homotopy Theory. However, it seems that far fewer examples of non-formal homogeneous spaces are known.

In this article we provide several construction principles and characterisations for non-formal homogeneous spaces, which will yield a lot of examples. This will enable us to prove that, from dimension 72 on, such a space can be found in each dimension.

Subjects: **Algebraic Topology (math.AT)**; Differential Geometry (math.DG)

MSC classes: 57N65 (Primary) 57T15, 57T20 (Secondary)
