ON THE TWO-DIMENSIONAL STRUCTURE OF THE SEQUENCE OF RANDOM NUMBERS GENERATED BY MULTIPLICATIVE CONGRUENTIAL GENERATORS

Luo Ping(Wuhan Transportation University,Wuhan)

Abstract:

Abstract The multiplicative congruent generators (MCG) are widely applied to emulation and simulation. In this paper, it is pointed out that the point set of dimension two consisting of pseudo-random numbers generated by MCG always distributes over strips; and the point set consisting of successive normals found by transforming the output of MCG under the Box-Muller algorithm, always distributes over spirals. By using digital examples, it is shown that this defective geometrical structure might be improved by means of combination.
