摘要

应用Youla二自由度控制器设计参数化公式,对电子换向电机伺服系统导出了基于一自由度控制设计的二自由度H ∞ 控制器结构,该结构用Kwakernaak多项式H ∞ 优化设计方法获希望的跟踪特性,用Zames的模型参考变换近似逆概念对扰动进行最佳抑制,并对负载扰动和参数变化的敏感性进行分析。实验结果表明系统具有良好的跟踪特性和抗扰性。

Abstract

By using Youla parametrization of two-degrees-of-freedom controller design, an H ∞ optimal robust controller is proposed for electronically commutated motor servo system based on one-degree-of-freedom controller design. The expected tracking performance is obtained by using Kwakernaak's polynomial H ∞ optimal design method. The optimal rejection of disturbances is obtained by using Zames' model reference transformation approximate inverse concept. The sensitivity to load disturbance and parameters variation are analysed. The experimental results demonstrate its excellent tracking and disturbance suppression performance.
