摘要:

利用氧化钕和盐酸为原料制得Nd(phen)2Cl3(三氯二邻菲罗啉合钕),测得其光谱特性并以稀土氧化钕、苯甲酸和邻菲罗啉为原料制得绿色液体激光介质钕离子的配合物——NdB3phen(三苯甲酸—邻菲罗啉合钕)。利用飞秒激光器,采用单光束Z-扫描法研究了NdB3phen的三阶非线性光学特性。结果表明:当入射飞秒激光脉冲波长为400 nm,峰值功率密度为 2.94×10^{14} W/m²,脉宽为117 fs时,测得样品NdB3phen的非线性折射率为 -2.84×10^{-18} cm²/W|NdB3phen在开孔条件下呈现反饱和吸收现象,测出双光子吸收系数的值为 9.11×10^{-12} m/W。实验结果表明,NdB3phen的双光子吸收系数和非线性折射率随着光强的增强而增大。

关键词: 三苯甲酸—邻菲罗啉合钕 Z扫描 非线性折射 非线性吸收 液体激光器

Nonlinear Optical Properties of the “Green” Liquid Laser Medium

Abstract:

Using Nd₂O₃ and HCl as raw materials, Nd (phen)₂Cl₃ was obtained and its spectral characteristics were measured. With Nd₂O₃, benzoic acid and o-phenanthroline as the raw material, green liquid laser medium Nd³⁺ ions complexes—NdB3phen (tribenzoic acid-phenanthroline co-Nd) was prepared. The third-order non-linear optical properties of NdB3phen were studied using femtosecond laser and signal-beam Z-scan method. When the incident femtosecond laser pulse wavelength is 400 nm, the peak power density is 2.94×10^{14} W/m², and pulse width is 117 fs, the measured nonlinear refractive-index coefficient of the sample is -2.84×10^{-15} cm²/W. Under the opening aperture configuration, NdB3phen presents phenomenon of the reverse saturated absorption, and the measured two-photon absorption coefficient is estimated to be 9.11×10^{-12} m/W. The experimental results show that two-photon absorption coefficient and nonlinear refractive-index coefficient of NdB3phen refractive index become more intense.

Keywords: Tribenzoic acid-phenanthroline co-Nd Z-scan Nonlinear refraction Nonlinear absorption Liquid laser
