Optik

International Journal for Light and Electron Optics

Optik publishes articles on all subjects related to light and electron optics and offers a survey on the state of research and technical development within the following fields:

Optics:

- Optics design, geometrical and beam optics, wave optics
- Optical and micro-optical components, diffractive optics, devices and systems
- Photoelectric and optoelectronic devices
- Optical properties of materials, nonlinear optics, wave propagation and transmission in homogeneous and inhomogeneous materials
- Information optics, image formation and processing, holographic techniques, microscopes and spectrometer techniques, and image analysis
- Optical testing and measuring techniques
- Optical communication and computing
- Physiological optics
- As well as other related topics.

Electron optics:

- All methods strongly related to light optics, e.g. geometrical electron optics, imaging theories and methods, GRIN optics, geometrical aberration
- Instrumentation and equipments for guiding, focusing and imaging of charged particles, spectrometers and beam lithography
- Image reconstruction and analysis, holographic methods

It publishes original papers and short notes on theoretical and experimental research in English. OPTIK addresses itself especially to scientific and technical working specialists in this field.

Editor Prof. Dr. Theo Tschudi

CITEALERT

CiteAlert

is a free, unique and automated service to notify authors when their titles are cited in an Elsevier journal

CITEALERT

Impact factor:

0.524

5 year impact factor:

0.519

Imprint: Urban And Fischer

ISSN: 0030-4026

CiteAlert - a service to notify authors when their articles are cited in an Elsevier journal
