

# Knot Universes in Bianchi Type I Cosmology

[Ratbay Myrzakulov](#)

(Submitted on 4 Apr 2012 (v1), last revised 2 Jan 2013 (this version, v4))

We investigate the trefoil and figure-eight knot universes from Bianchi-type I cosmology. In particular, we construct several concrete models describing the knot universes related to the cyclic universe and examine those cosmological features and properties in detail. Finally some examples of unknotted closed curves solutions (spiky and Mobius strip universes) are presented.
