

## General Relativity and Quantum Cosmology

# The effect of the Tides on the LIGO Interferometers

[Adrian Melissinos](#) (for the LSC)

(Submitted on 4 Jan 2010 (v1), last revised 5 Jan 2010 (this version, v2))

We present data on the modulation of the dark port power at the free spectral range frequency of the LIGO 4 km interferometers. It is found that the power is modulated exactly at the tidal frequencies to a precision of 6e-9 Hz.
