Cycles of the logistic map

Cheng Zhang

(Submitted on 2 Apr 2012 (v1), last revised 26 Nov 2012 (this version, v2))

The onset and bifurcation points of the n-cycles of a polynomial map are located through a characteristic equation connecting cyclic polynomials formed by periodic orbit points. The minimal polynomials of the critical parameters of the logistic, H\'enon, and cubic maps are obtained for n up to 13, 9, and 8, respectively.
