摘要 利用多重尺度法,研究了弱阻尼作用下带有对称双阱势的氢键链中的波动行为,发现在0(ε)级阻尼作用下,原来在布里渊区中心和边界处的非传播孤子变为以群速度为 λ 传播的孤子,且其格波幅度和群速度都会随时间发生变化.同时由晶格动力学方程出发导出了耗散型的非线性Schrödinger方程,并对方程进行解析求解,结果表明:在0(ε)级阻尼作用下,对称双阱势氢键链中存在一种传播的包络暗孤子解.

关键词: 阻尼作用 多重尺度方法 包络暗孤子

Abstract: By the method of multiple scales, we have investigated the behavior of waves in a hydrogen-bonded chain with symmetric double-well potentials under damping and found that the amplitude of the lattice waves decreases and the group velocity becomes slow under the action of damping. At the same time, we have derived the Damped NLS Equation and obtained its analytical solution. The results show that: there exists propagating dark envelope soliton in the hydrogen-bonded chain with symmetric double-well potentials under the damping.

Key words: damping method of multiple scales dark envelope soliton
