Abstract The method for extraction and determination of tramadol was established by HPLC-MS/MS. Calibration curves are linear on injection of amounts range of $50\text{--}1\,000 \mu\text{g}\cdot\text{L}^{-1}$. The limit of detection is $10 \mu\text{g}\cdot\text{L}^{-1}$, and the recovery is above 80% for Tramadol.

Key words tramadol _ HPLC-MS/MS _ blood
