Abstract An essential oil was extracted from the traditional Tibetan medicine of *Pyrethrum tatsienense* by steam distillation method. The chemical components of the essential oil were analyzed by gas chromatography-mass spectrometry (GC/MS) and 30 compounds were identified, which account for 67.5 % of the total essential oil from the flowers of *P. tatsienense*.

Key words *Pyrethrum tatsienense* _ essential oil _ chemical component _ GC/MS
