**Abstract** ESI-MS analytical method was employed to study extracts of unprocessed and processed *Radix Paeoniae alba*. The results of the experiments prove that different processed methods is making a certain different influence on the contents of chemical components in *Radix Paeoniae alba*. This method is simple and accurate. It can be used for analyse of Traditional Chinese Medicine(TCM).

**Key words** *Radix Paeoniae alba* \_ processing technique \_ ESI-MS
