摘要 以Y分子筛为母体,采用浸渍法制备了 Y_2O_3/Y 、 CeO_2/Y 和 La_2O_3/Y 三种吸附剂,以脱除正辛烷中的苯并噻吩为探针反察了稀土金属氧化物负载量、吸附温度、吸附时间和剂油比对吸附剂脱硫性能的影响.结果表明,稀土金属氧化物最佳负载量(质量分数),所得吸附剂在50 °C、1 h、剂油比1:30条件下,脱硫率均达到60%以上.甲苯的存在明显降低了吸附剂的脱硫.稀土金属氧化物在吸附过程中发生流失,在相同的条件下,三种稀土金属氧化物中, Y_2O_3 的流失量最小,而 CeO_2 的流失量最大, CeO_2 的流失量是 Y_2O_3 的10倍.

关键词: 吸附脱硫 Y分子筛 稀土金属氧化物 苯并噻吩 甲苯

Abstract: Y_2O_3/Y , CeO_2/Y and La_2O_3/Y samples were prepared by impregnation with Y zeolites as precursor. Removal of benzothiophene from octane was employed as probe reaction. The effects of loading amount of rare-earth metal oxide, adsorption temperature, adsorption time and ratio of adsorbent to oil on desulfurization have been investigated. The results showed that the optimum loading amount of the rare-earth metal oxide was 5%. More than 60% of benzothiophene was removed over the obtained samples at conditions of 50 °C, 1 h and 1:30 of adsorbent to oil ratio. Addition of toluene to the mixture of octane and benzothiophene depressed obviously the desulfurization capability of the samples. The rare-earth metal oxides were washed away during the desulfurization process. The loss amount of Y_2O_3 was the least, while CeO_2 was the largest. The loss amount of CeO_2 was 10 times larger than that of Y_2O_3 .

Key words: desulfurization Y zeolites rare-earth metal oxide benzothiophene toluene
