PDF for 1011.0989

We are now attempting to automatically create some PDF from the paper's source.

...this may take a little time.
For convenience, your browser has been asked to automatically reload this URL in 3 seconds.

With some very old browsers you may need to manually reload. If you do this, you are *strongly* advised to wait the recommended 3 seconds: multiple rapid-fire requests could easily result in an errant trigger of our rampaging robot alert (in which case there's no telling what consequences may result).

What's happening?

The source for this paper is being processed by a script which uncompresses it, unpacks it, determines the source type (e.g. TeX/LaTeX 2e/PDFLaTeX ...), then runs the appropriate programs.

Where possible, the output will contain hyperlinks made possible by HyperTeX tools.

PDF upgrade

PDF generated by arXiv is conforming to level 1.4. If you have a very old version of the Acrobat Reader (before v5) then you need to upgrade (see our PDF help).

How long will this take?

...it varies. Depending on the complexity of the paper, it could be a few seconds for PostScript, or a minute or more for PDF.
