【标题】：零速近似掩盖了牛顿引力场以光速传播的本质(修订稿)

【作者】：汤克云

牛顿万有引力公式与时间无关，被认为是一种“超距作用”。牛顿万有引力公式在解释太阳系行星轨道等方面取得了巨大成功，但在解释水星进动、光子偏折等方面遇到了不可克服的困难，也不满足狭义相对论的洛伦兹协变，无法与电磁学理论统一起来。我们重新审视了万有引力定律的发现过程，将万有引力定律与麦克斯韦——李纳德——维谢尔电磁理论比较，较全面地考虑了相对速度和相对加速度对引力场的贡献，发现牛顿引力定律只是推迟引力在零速情况下的近似或极限，零速近似掩盖了牛顿引力场以光速传播的本质。地球重力场可以测量，宇航员会感到失重，宇宙间恒星和行星的存在都已否定了超距作用；固体潮观测数据与日月引潮力符合得很好，正是引力场以光速传播的直接证据。

【TITLE】：Zero-speed approximation obscures the Newtonian gravity's nature of travelling at the speed of light (revised version)

【AUTHORS】：Keyun Tang

Newtonian gravitational law is time-independent, seems to be an "action at a distance". It has a great success in the interpretation of the planetary orbits in the solar system, but has encountered insurmountable difficulties to explain Mercury's precession and deflection of light ray. It also can not to meet the Lorentz covariance of special relativity, and failed to unify with electromagnetism theory. We have re-examined the history of discovery of the Newtonian gravitational law, compared the Newtonian gravitational law with Maxwell electromagnetic theory by considering the contribution of the relative velocity and relative acceleration to the gravitational field, and found that Newtonian law of gravitation is the limitation or approximation of retarded gravitation in the case of zero velocity. The zero-speed approximation obscures the Newtonian gravity's nature that gravity travels at the speed of light. Earth's gravity is measurable with limited values, astronauts fell weightless and the existence of stars and planets in the universe, all those have repudiated that gravitational action is "the action at a distance"; Earth tide observation data are well agreed with the tidal forces of the Moon and the Sun, it is exactly the direct evidence that gravity travels at the speed of light.

【KEYWORDS】：Newtonian gravitational law, retarded gravitation, speed of light, speed of gravity , Earth tide
