News From the Field

Researchers find arid areas absorb unexpected amounts of atmospheric carbon

April 6, 2014

Researchers, led by a Washington State University biologist, have found that arid areas, among the biggest ecosystems on the planet, take up an unexpectedly large amount of carbon as levels of carbon dioxide (CO₂) increase in the atmosphere.

The findings give scientists a better handle on the

Earth's carbon budget--how much carbon remains in the atmosphere as CO₂, contributing to global warming, and how much gets stored in the land or ocean. [Full Story](#)

Source

Washington State University

The National Science Foundation (NSF) is an independent federal agency that supports fundamental research and education across all fields of science and engineering. In fiscal year (FY) 2014, its budget is \$7.2 billion. NSF funds reach all 50 states through grants to nearly 2,000 colleges, universities and other institutions. Each year, NSF receives about 50,000 competitive requests for funding, and makes about 11,500 new funding awards. NSF also awards about \$593 million in professional and service contracts yearly.
