The Core Elements of Future UN Negotiation on Climate Change and Its Perspective--The interpretation and analysis on Bali Roadmap

Xuedu LU

Abstract This paper analyzes the Bali Roadmap and its implication. As the outcome of the Thirteenth Session of the Conference of Parties (COP13) of the United Nations Framework Convention on Climate Change (UNFCCC) and the Third Session of the Meeting of the Parties of the Kyoto Protocol to UNFCCC, the Bali Roadmap guides the negotiation in the coming two years on the elements: GHG mitigation commitments beyond 2012 by developed country Parties, mitigation actions in future by developing country Parties, adaptation to climate change, the provision of technology transfer, financing and capacity building by developed countries to developing country Parties for them to take actions of mitigation climate change. Furthermore, the paper provides the perspectives on this negotiation, and concludes that the successful negotiation would be very crucial for the protection of global climate.
