

Welcome to the Center for Space Physics

The Center for Space Physics (CSP) is a university-based center for research and education in space science and space-related technologies. The CSP constitutes a collaboration between science and engineering faculty at Boston University under a common mission: to advance our understanding of the atmospheres, magnetospheres, and plasma environments of our solar system. This region of space holds special interest because of its relative accessibility through space-based and ground-based sensing techniques, supported by theoretical and numerical modeling, and a variety of advanced data analysis strategies. The insights gained through these efforts help us understand how habitable environments evolve in the cosmos, in addition to having practical relevance in a society that is increasingly reliant on space-based assets.

The CSP FY13 Annual Report is available [here](#).
