The lake science development in China

作者: YANG Guishan JIANG Jiahu

China is a country abundant in lakes. Lake science development in China, not only aims at the international frontiers of correlative subject development, but also focuses on the national strategic needs in different ages. This paper describes the general situation and distribution characteristics of Chinese lakes, systematically reviews development process of Chinese lake science and its progress in lake physics, lake chemistry, lake biology, lake sediment and lake-watershed management, finally looks forward to the developing tendency of Chinese lake science in future.
