摘要:

本文将国内外众多沉积岩阶段划分方案归纳为 5 种类型, 并认为最合理的划分方案同生成岩作用、再生成岩作用前理解不同、使用混乱的各种沉岩作用术语进行评述, 提出了主要沉积成岩阶段划分方案的对比表。

Abstract:

In this paper various classifications of diagenetic stages are discussed and grouped into five that it is most reasonable to divided diagenesis into syndiagenesis, anadiagenesis and epi diagenesis, syngenesi, diagenesis, epigenesis and ep-idiagenesis is also suitable in consideration of the fact that two classification schemes reflect the present level of diagenesis research. The authors review all are confused in comprehension and usage now and present a comparative table of main schemes of classification.
