Practice and Reflection on Water Management in Taihu Basin

YE Shouren (Taihu Basin Authority, Ministry of Water Resources, Shanghai 200434,P.R.China)

Abstract Taihu basin, richly endowed by natural in climate, geography and water resources features, has become a developed economic area with splendid culture. But frequently attacked by the flooding and logging disasters in the basin, the government attaches great importance to the water resources regulation and mitigation. Since Taihu Basin Authority established in 1984, the working results have been attained in basin plan, mitigation, distribution, and management. For further coordination development in water and economic, water management in basin should be focused on planning management, distributing management, water resources management, water works management and water affair management, as well as fasting straighten out management relationship. Through regulating, distributing and managing in the basin, and overall raising capacities on flood control, disaster reduction, water resources distribution and control, basin flood control and water supply would be ensured, so as to improve basin water environment.
