中文摘要:

建立了一个测定过氧亚硝基阴离子(ONOO⁻)化学发光的改进体系, 测试了某些抗氧化剂清除ONOO⁻的作用, 其体系的组成和启动发光的程序如下: 向pH 10.5碳酸缓冲液配的0.01 mol/L浓度NaN₃溶液通O₃ 30 s, 取其800 μl原位注入含有100 μl水配样品和100 μl的0.001 mol/L鲁米诺溶液中, 启动化学发光(chemiluminescence, CL), 立即测定每6秒的脉冲数(CP6S), 连续测定10~30次。根据实际需要, 选其某一次的CL强度作为评判指标, 对比抗氧化剂的活性。该发光体系灵敏、简便、且较稳定, 最低可检测限为8.74 μmol/L的ONOO⁻量, 线性范围为8.74~74.04 μmol/L。批内变异系数3.35% (n=10), 批间变异系数5.52% (n=10)。测得维生素C(Vit.C)、茶多酚(EGCG)、原花青素、硫脲皆有抑制CL, 即清除ONOO⁻的作用。

英文摘要:

An improvement of chemiluminescent system for determination of peroxynitrite anion (ONOO⁻) has been made. In this system, the effect of some antioxidants for scavenging ONOO⁻ was tested. The constitute of this system and the program of starting were followed as: The ozone (O₃) was bubbled through a glass-frit into 10 ml 0.01 mol/L solution of sodium azide in CB(pH 10.5) to generate ONOO⁻. The 800 μl ozonized solution of azide was injected into a glass tube *in situ* which contains 100 μl sample and 100 μl luminol solutions to initiate chemiluminescence (CL). The pluses / 6 seconds (CP6S) were determined immediately and continually for 10~30 times. A certain CL intensity (CP6S) was chosen as evaluation index to compare the activity of antioxidants. This chemiluminescent system is sensible, simple and stable. The determination limit was 8.74 μmol/L ONOO⁻. The linear rang was 8.74~74.04 μmol/L ONOO⁻. The intra batch and inter batch variation coefficient (CV%) of the analysis were 3.35%(n=10) and 5.52%(n=10) respectively. It was tested that Vit.C, teapolyphenol, procyanidin and thiourea all have effects on scavenging ONOO⁻.
