News Release 17-113

## NSF-funded scientists to present on long-term ecological research findings at AGU fall meeting

**Reports on results of hurricane experiments; resiliency of arctic ecosystems; factors influencing drought**

A salt marsh die-off on Sapelo Island at NSF's Georgia Coastal Ecosystems LTER site.

Hurricanes Harvey, Irma and Maria this fall. Wildfires that raged across California and British Columbia this summer. Unseasonable cold snaps in South Florida in past winters. How do such events shape and re-shape ecosystems?

And how do events from past decades affect the ways in which today's oceans, coasts, forests and fields function?

Scientists conducting studies at the National Science Foundation's (NSF) 28 Long-Term Ecological Research (LTER) sites are working to understand ecosystem processes that play out over varying timescales.

At the [2017 American Geophysical Union \(AGU\) Fall Meeting](https://www.nsf.gov/cgi-bin/good-bye?https://fallmeeting.agu.org/2017/) <<https://www.nsf.gov/cgi-bin/good-bye?https://fallmeeting.agu.org/2017/>>, held at the New Orleans Ernest N. Morial Convention Center in New Orleans, Louisiana, from Dec. 11-15, 2017, dozens of LTER researchers will discuss new results on a range of topics, from how ecosystems recover from hurricanes and droughts to the resiliency of arctic ecosystems.

Highlights of LTER research being presented at the AGU Fall Meeting include:

- An all-day look at research on arctic ecosystems.
- Geoscience research and why it matters to everyone.
- Results of hurricane and drought experiments.
- New uses of remote sensing to detect the health of undersea kelp forests.
- Assessing the potential for the inland migration of salt marshes.
- How wind and water erosion will change drylands in the future.
- Time dependence of aerosol light scattering downwind of forest fires.
- Snowpack cold content and snowmelt timing and rate.

Find a list of LTER-related sessions, talks (in bold) and posters by day below.

*The National Science Foundation (NSF) is an independent federal agency that supports fundamental research and education across all fields of science and engineering. In fiscal year (FY) 2018, its budget is \$7.8 billion. NSF funds reach all 50 states through grants to nearly 2,000 colleges, universities and other institutions. Each year, NSF receives more than 50,000 competitive proposals for funding and makes about 12,000 new funding awards.*
