Society for Experimental Biology

Welcome to the Society for Experimental Biology!

Experimental Biology is the study of the form and function of animals and plants at all levels of organisation from the molecular and cellular to the whole organism. The ethos of Experimental Biology is one of interdisciplinary studies usually conducted within the context of the environment and evolution of the organism.

The Society for Experimental Biology believes that the broad nature and lack of "ology" boundaries implicit in Experimental Biology give it a pivotal role in the development of Life Sciences which are of considerable benefit to its members and to society. In particular, Experimental Biology contributes to knowledge that can be applied to the development of agriculture and medicine and to understanding the impacts of human activity on living organisms and ecosystems.

Organising a meeting? We can help! SEB Management can provide secretariat support for meetings, including registration and abstract administration. Tailored support packages to meet your needs!

Containing lots of useful information on everything from applying for jobs to CV writing, Next Steps is our new careers resource for undergraduate

students, and is available as a free download.

"Essential Reviews in Experimental Biology" is the new peer-reviewed series published by the SEB which aims to encompass all the areas of science that the society represents. Volumes 1 - 5 are available for purchase.

Join the
SEB
today -
you don't
need to
live in the
UK to join
- we have
members

all over the world!!
