

Longitudinal and transverse velocity scaling exponents from merging of the Vortex filament and Multifractal models

K. P. Zybin, V. A. Sirota (P.N.Lebedev Physical Institute of RAS, Moscow, Russia)

(Submitted on 6 Apr 2012)

We suggest a simple explanation of the difference between transverse and longitudinal scaling exponents observed in experiments and simulations. Based on the Vortex filament model and Multifractal conjecture, we calculate both scaling exponents for any n without any fitting parameters and ESS ansatz. The results are in very good agreement with the data of simulations.
