

## Inclusive Jet Production at CDF

<http://www.firstlight.cn> 2007-06-30

We present results on inclusive jet production in proton-antiproton collisions at  $\sqrt{s} = 1.96$  TeV. The measurements are based on 1.0 fb<sup>-1</sup> of CDF Run II data and were carried out for jets in five different jet rapidity regions up to  $|Y_j| \leq 2.1$ . Both the midpoint cone based algorithm and kT algorithm were investigated to reconstruct the jets. The results are compared to next-to-leading order perturbative QCD predictions.
