

Comparison of surface laser alloying of chosen tool steel using Al2O3 and ZrO2 powder

http://www.firstlight.cn 2010-03-12

In this paper there is presented the laser treatment as a part technology applied for steel surface manufacturing. There is presented lase r treatment with remelting of hot work tool steel 32CrMoV12-28 with ceramic powders especially oxides like aluminium oxide and zirconiu m oxide. The structure as well as improvement of mechanical properties is a practical aim of this work as well as improvement of hardness a s a very important properties for practical use.
