摘要: 以Ti粉、B4C粉和SiC粉为原料,用真空热压烧结工艺制备了原位自生颗粒增强的Ti--B--Si--C系钛基复合材料,研究了复合材料的显微组织和力学性能。结果表明,使用的初始粉末不同,原位自生颗粒的组成不同,复合材料的性能也有明显的差别。

关键词: 复合材料 钛基复合材料 原位自生 力学性能

Synthesis and Performance of In - situ Ti - B - C - Si Composites

State Key Lab of Powder Metallurgy, Central South University, Changsha 410083

Abstract: A in - situ Ti - B - C - Si composite with fine TiB₂, TiC and Ti - Si phase dispersed in composite was synthesized using titanium, B4C and SiC powders using hot - pressing sintering. The microstructure and mechanical properties of the composite were observed by using X - ray diffraction (XRD) analysis, scanning electron microscope and mechanical property testing. The results show that starting powder reactants have much effect on in - situ phase content and mechanical properties in titanium matrix composites.

Keywords: composites titanium matrix composites in - situ mechanical properties
