广西大学 物理科学与工程技术学院, 广西 南宁 530004

摘要:

基于铁电体畴反转结构的电光偏转特性, 设计了一种片状集成的 4×4 电光开关, 其由四个结构相同的半抛物和四个抛物形微小偏转器集成构成。通过优化抛物形偏转器结构, 给出了电光开关的设计参数, 电光开关性能通过光束传播法进行仿真模拟, 仿真结果表明该开关切实可行。实际应用中, 系统误差可以通过电场调节补偿, 使光路准确交换。该片状电光开关的整体尺寸为 $48\text{ mm}\times 2.2\text{ mm}\times 0.5\text{ mm}$ (长×宽×高), 最大使用电场约 $13.73\text{ V}/\mu\text{m}$, 适用于高速交换的光互连系统。

关键词: 集成光学 光开关 电光偏转 畴反转 光束传播法

Design and Simulation of Planar 4?4 Electro-optic Switches Based Ferroelectric Inverted Domains

College of Physics Science and Technology, Guangxi University, Nanning 530004, China

Abstract:

An integrated 4×4 planar electro-optic switch is designed based on the electro-optic effect in ferroelectric inverted domains. It integrated four minute half-parabola shaped and four parabola shaped deflectors with the same configurations in a ferroelectric wafer. To optimize the design of the parabola shaped deflectors, an appropriate electro-optic switch is provided. Its properties of switch and exchange are analyzed using the beam propagation method (BPM). Simulation results show that the 4×4 planar electro-optic switch is feasible and the beam deflection errors can be compensated in practice by adjusting applied electric-field. The size of the optical switch is $48\text{ mm}\times 2.2\text{ mm}\times 0.5\text{ mm}$ and its maximum applied electric-field is about $13.73\text{ V}/\mu\text{m}$. It has potential applications in high-speed optical exchange systems.

Keywords: Integrated optics Optical switch Electro-optic deflection Ferroelectric domain inversion BPM
