::文章简介::

摘要: 介绍了一套风机串联吸气性能试验装置方案、设计及研制。基本实现了压力、流量、功率、转速、扭矩的自动采集与处理, 性能曲线的绘制。现场运行结果表明, 该试验装置通用性较强、测试准确性较高、效果良好。

Research and Manufacture on Serial Connection Test Bed for Fan Inspiration Performance

Abstract: The scheme, design and research on test equipment for fan inspiration performance is introduced. The sampling and dealing with of pressure, flow, power, speed, torque and the drawing of performance curve are realized basically. The result of field operation shows, the equipment is used widely, the measuring is accurate, and the effect is good.

Key words: Fan Series Connection Performance test bed
