摘要:

对近年来信息技术领域提出的数据流技术在电网自动化中的应用进行了充分探讨, 目的是利用信息技术来尽可能地提高电网的自动化水平。给出了包含传感与量测、实时数据分析处理和在线决策3个环节的用于实现电网自动化的闭环过程, 阐述了用数据流技术和数据流系统实现其中的实时数据分析处理环节的具体方法。对智能电网环境下便于提高智能电网自动化水平的实时数据处理架构进行了展望。

Abstract:

To improve the automation level of power grid as far as possible using the information technology, the application of the data stream technology in grid automation, which is proposed in the area of the information technology in recent years, is adequately discussed. A closed-loop process for achieving grid automation, which consists of three segments, i.e., sensing and measurement, real-time data analysis and processing, and online decision-making, is proposed, and an approach for implementing the segment of real-time data analysis and processing using the data stream technology and data stream management system is expounded. The real-time data processing architecture that can conveniently improve the automation level of power grid in the environment of smart grid is also prospected.

Keywords: smart grid data stream data stream management system continuous query alarm
