新能源与分布式发电

基于马尔可夫链的光伏发电系统输出功率短期预测方法

丁明, 徐宁舟

教育部光伏系统工程研究中心(合肥工业大学), 安徽省 合肥市 230009

摘要:

提出了一种直接预测光伏电站出力的方法。该方法基于马尔科夫链, 通过统计光伏电站历史功率数据建模, 直接预测光伏电站出力。理论推导证明了该数学模型的可行性。以教育部光伏中心的光伏电站为例进行建模预测, 证明了该方法的有效性, 并通过调整模型参数获得了更加精确的结果。

A Method to Forecast Short-Term Output Power of Photovoltaic Generation System Based on Markov Chain

DING Ming, XU Ningzhou

Research Center for Photovoltaic System Engineering (Hefei University of Technology), Ministry of Education, Hefei 230009, Anhui Province, China

Abstract:

A method to forecast output power of photovoltaic (PV) plant is proposed. Based on Markov chain utilizing the statistics of historical data of PV plant, a model of PV plant is built and the output power of the PV plant can be directly forecasted. The feasibility of the proposed mathematical model is verified by theoretical derivation. Taking the PV plant in PV Centre of the Ministry of Education (MOE) of the People's Republic of China for example, the modeling of the PV plant is performed and the output power forecasting proves the effectiveness of the proposed method. More accurate forecasting results are obtained by adjusting the parameters of the built model.
