电力系统

电能质量综合补偿器的稳定性及电流控制特性分析

盘宏斌, 邵帅, 刘勇, 黄辉先

湘潭大学 信息工程学院, 湖南省 湘潭市 411105

摘要:

对电能质量综合补偿器的稳定性及电流控制的稳态误差特性进行了分析。首先, 根据系统的等效电路图导出系统的结构图, 求得系统对应的传递函数, 证明系统为一个结构稳定的系统, 根据Routh判据给出了系统稳定的充要条件。其次, 对广义积分迭代控制算法在谐波电流抑制应用中的稳态误差特性进行了分析, 数学推导证明广义积分控制器可以实现对谐波电流的完全跟踪, 克服了常规比例积分控制的有差特性。仿真结果说明了所提综合补偿系统结构的可行性, 也验证了系统的稳定性及其稳态无差特性分析的正确性。

Abstract:

The Stability of power quality combined compensator and the steady state error performance are analyzed. Firstly, based on equivalent circuit diagram the structural diagram of power quality combined compensator is educed to attain corresponding transfer function of the system, and then according to Routh criterion the necessary and sufficient conditions for stability of the system are given to prove this system is structurally stable; secondly, the steady state error performance of applying generalized integral iteration control algorithm in harmonic current suppression is analyzed, and it is proved by mathematical derivation that the generalized integral controller can perfectly trace harmonic currents, thus the error performance of the traditional PI controller is surmounted. PSIM simulation results show that the sturcture of the proposed combined system is feasible, and the stability of the proposed system as well as the correctness of the analysis on its steady state error performance are verified.

Keywords: combined compensator active power filter stability steady state error improper integral control
