We are very pleased to bring the **2009 International Conference on Energy and Environment Technology (ICEET' 09)** to Guilin, China for 2009. Now during the process of the rapid development of global economics, the Energy and Environment are well-recognized as the most important factor of human society's sustainable development, and the application of measurement and control technology are also playing a very important role in the utilization and protection of energy and environment. **ICEET' 09** is the one truly comprehensive forum where you can fully assess the "big picture" – and see exactly how the economic and market forces, new technologies, regulatory developments and industry trends all merge to shape your critical decisions on your organization's energy, environment, and economic future.

The **ICEET' 09** features a large, multi-track conference agenda, a full line-up of seminars on a variety of current topics and a comprehensive exposition of the market's most promising new technologies.

All accepted papers will appear in conference proceedings published by the IEEE Computer Society and will be indexed by both **EI Compendex** and **ISTP**.

There's no better way to find the immediate answers you need, and to assess the full scope of potential energy and environment solutions available to you, than by attending the 2009 International Conference for Energy and Environment Technology.
