摘要:

基于B/S架构的无线传感器网络远程信息采集系统存在着实时性差、安全性差等特点, 特别是在数据传输量大的情况下尤其突出。本文设计并实现了一种基于C/S架构的无线传感器网络信息采集监测系统。该系统采用自主研发的Node433TM无线传感器网络通信协议栈和基于ARM9的无线传感器网络嵌入式网关。系统具有实时响应性强, 可靠性高的特点, 可应用于数据传输量大的传感器网络数据采集与监测。

关键词: 无线传感器网络; 嵌入式网关; C/S; 信息采集

A Design of Data-Collection and Monitoring System Based on Wireless Sensor Networks

Author's Name:

Abstract:

The data-collection and monitoring system based on c/s mode for wireless sensor networks was introduced. The system adopts Node433TM network protocol of independent development and the embedded gateway based on ARM9. The system has many merits such as high real time and high reliability. It is well suitable for monitoring of sensor networks which need high real time and massive data transmitted.

Keywords: wireless sensor network; embedded gateway; c/s; data-collection
