IEEE Mobile Cloud Computing, Services, and Engineering

About The Conference:

The integration of mobile computing and cloud services and engineering enables new applications that provide resources and services on an intelligent basis, process big data collected from mobile sensors, and support Internet of things (IoT) with massive cloud-based backend, where the 5G technology is expected to be an important enabler of this integration. Such applications will have tremendous impacts on almost every aspect of our daily life, including transportation, e-commerce, healthcare, safety and location privacy, smart home and smart city, social interaction, and many more.

This conference will provide a great platform to allow researchers in academia and industry to share their latest research ideas and results, development activities, and the emerging industry technologies on mobile cloud computing, services, and engineering. The conference solicits original technical papers, not previously published and not currently under review for publication elsewhere. Papers will be judged on originality, significance, clarity, relevance, and correctness. Extended versions of the best papers will be invited for fast-track publication in a planned Special Issue on Mobile Cloud Computing.

Submit Paper

SUBMIT ([HTTPS://EASYCHAIR.ORG/CONFERENCES/SUBMISSION_NEW.CGI?A=19590228#{FR:NEOQ8MOLOIZC}](https://easychair.org/conferences/submission_new.cgi?a=19590228#{FR:NEOQ8MOLOIZC}))
