::文章简介::

摘要:利用计算流体商业软件,采用Spalart—Allmaras湍流模型,通过SIMPLEC算法求解连续性方程、湍流时均N-S方程、能量方程,对某一无叶扩压器离心压缩机整级三维粘性湍流流场进行了数值分析,通过比较0.8、0.75两个马赫数下计算结果与试验测量结果在效率和压比等方面符合程度,讨论了计算软件在模拟流体机械内部流动方面的适用性。

Numerical Simulation for Centrifugal Compressor Performance Based on CFD Software and the Comparison with Test Result
Abstract: The SIMPLEC method is adopted to solve continuity equation, turbulent time-averaged N-S equation and energy equation based on CFD software and Spalart-Allmaras turbulent model. The 3-D viscous and turbulent flow field in centrifugal compressor with some vaneless diffuser is numerically analyzed by suing CFD software. Through comparing computation results with test results about efficiency and total pressure ratio under 0.8 and 0.75 mach, the applicability of CFD software on simulating internal flow of fluid machinery is discussed.

Key words: centrifugal compressor; flow performance; CFD software; numerical simulation; contrast analysis
