**摘要** 综述了光催化还原 CO<sub>2</sub> 的研究进展, 并重点介绍了本课题组在光催化还原 CO<sub>2</sub> 为碳氢燃料方面的研究工作, 通过该途径可降低 CO<sub>2</sub> 在大气中的排放浓度, 还可将 CO<sub>2</sub> 转化为烷烃、醇或其它有机物质, 从而实现碳材料的再循环使用。最后展望了该研究领域的前景。

**关键词:** 光催化 二氧化碳 还原 碳氢化合物

**Abstract:** CO<sub>2</sub> photoreduction as typical advanced technology has been becoming one of the most promising solutions to mitigate CO<sub>2</sub> emissions. Firstly, emission reduction and utilization of CO<sub>2</sub> was introduced. Then the present research status of photocatalytic conversion of CO<sub>2</sub> was reviewed, with particular attention to our recent progress on this field. The artificial photosynthesis technology helps one partially reduce atmospheric CO<sub>2</sub> levels and fulfill the recycle utilization of CO<sub>2</sub>. Finally, challenges and prospects for further development of this field are presented.

**Keywords:** [photocatalysis](#), [carbon dioxide](#), [reduction](#), [hydrocarbons](#)
